Background

South Eastern Sydney Local Health District (SESLHD) has a wide range of population health programs and services largely located within the Directorate of Planning Population Health and Equity (DPPHE). The Population Health Directorate Plan 2014-2017 outlines how our services and programs will respond to the key population health priorities and initiatives outlined in the District's overarching Strategy 2012-17 and Health Care Services Plan 2012-17. The Plan builds on the direction and guidance provided by key Commonwealth and State strategies.

A key strategy for the HIV and Related Programs (HARP) Unit, which sits within the DPPHE, is the NSW HIV Strategy released in December 2015. The Strategy's goals and targets work towards the virtual elimination of HIV transmission by 2020. As the South Eastern Sydney Local Health District, (SESLHD) NSW has approximately 40% of the population living with or seeking treatment for HIV within its borders, SESLHD's response to the challenge requires a coordinated approach and support from its Chief Executive (CE), the Directorate, and the HIV and Sexual Health Service Directors to work with the HARP Unit. In order to meet the ambitious targets set by the Ministry of Health, each Local Health District was asked to supply ongoing HIV testing and treatment data on a quarterly basis. This includes: (1) number of HIV tests; and, (2) data on CD4 count and antiretroviral treatment

From July 2013, NSW Ministry of Health started collecting both the HIV Minimum Data Set (MDS) data and WebNAP data from HIV and STI services. The HARP Unit Informatics team manages MDS^{WebNAP} data for The Albion Centre, Prince of Wales Hospital HIV Infectious Diseases Unit, Sydney Sexual Health Centre, the Kirketon Road Centre, HIV Outreach Team, St George Waratah Clinic, St George Short St Clinic, and Sydney Children's Hospital HIV Unit. Although data collection requires monthly reporting, MDS performance data will continue to be reported on a quarterly basis.

Objective

This report presents: (1) HIV testing and treatment data for SESLHD services; and, (2) non-admitted patient occasions of service (NAPOOS) analysis in SES/ISLHD, St Vincent's Hospital and the Sydney Children's Hospital HIV Unit. Domains include session type (e.g., face-to-face, case management), client characteristics (e.g., age, Indigenous status, language spoken at home, residence location), and number of clients per service.

Scope

Changes to content in the 2016 Data Report reflect recent changes to the Minimum Data Set. Principal Service Provided (PSP) codes are now redundant. The following parameters based on PSPs are not reported: HIV testing related occasions of service; HIV treatment and management occasions of service; STI testing, treatment and management occasions of service; and, occasions of service by activity category. However, we now report occasions of service by service unit. Note that occasions of service by preferred language has been replaced with occasions of service by country of birth.

Section 1 of the report covers SESLHD HARP services and Section 2 covers one service from St Vincent's Health Network, seven services from SESLHD, one service from ISLHD and one service from Sydney Children's Hospital Network.

Definitions

A **Non-admitted patient** or client of a health service facility is one who receives a service without undergoing a formal admission process.

A **non-admitted patient occasion of service** (NAPOOS) is a measure of the output for the part of the public health system that provides health care services to non-admitted patients. An **occasion of service** is any examination, consultation, treatment or other service provided by a health service provider to a patient on each occasion such service is provided.

The NSW HIV/AIDS and Sexual Health Ambulatory Care Minimum Data Set count two types of NAPOOS:

1. Individual (where a single patient or a family group receives one or more non-admitted patient services directly from any health care professional attached to a health care facility); and,
2. Non face-to-face (where the service provider and the client are in different locations during service provision, including services provided via telephone, telemedicine, case planning, case management and transport).

Section 1

Reports SESLHD HARP services progression in meeting the aims of the NSW HIV Strategy and performance measures set by NSW Health

HIV Testing

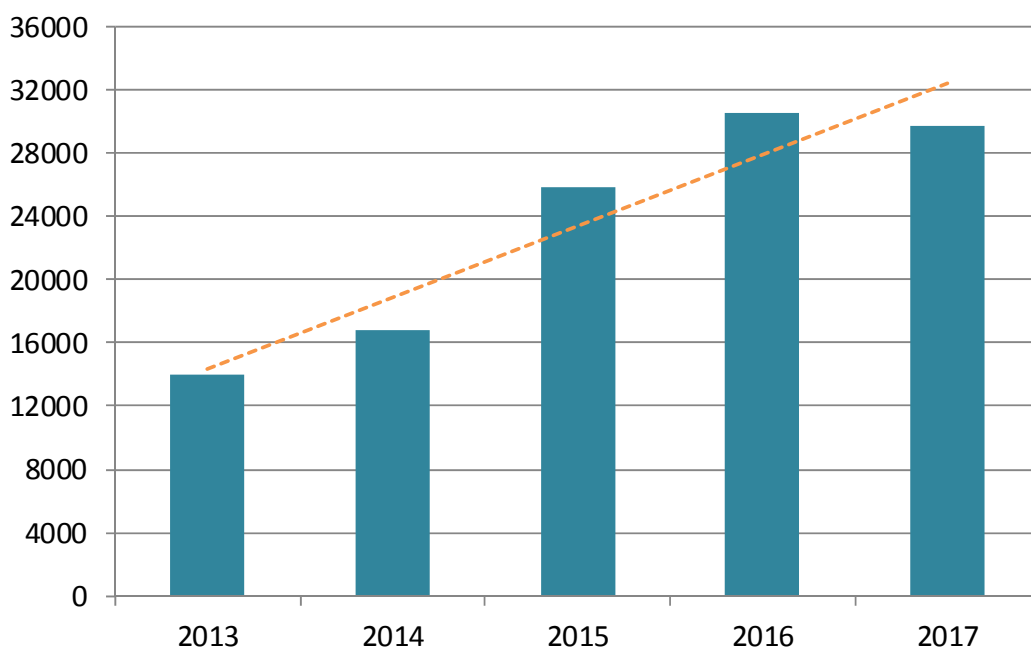

The number of HIV tests performed by service (Table 2) and for SESLHD overall (Figure 2) for the period 2013-2017 is shown below.

Table 1
Number of HIV tests by service (Period: 2013 – 2017)

HIV Testing					
Services	2013	2014	2015	2016	2017
Kirketon Road Centre	1646	2185	2065	3229	3926

Total SESLHD	13982	16827	25825	30499	29719
St Vincent's Health Network				1278	1545

Note: Data source for 2013-2014 is SEALS. From 2015 -2017, data is provided from HARP Services and includes Point of Care (PoC) tests.

Figure 1
SESLHD total number of HIV tests
 (Period: 2013– 2017)

In 2016 there was an 18.1% increase in HIV testing numbers from the previous year. In 2017, HIV testing numbers decreased by 2.6% from the previous year. The decrease in HIV testing numbers has generally been attributed to staff shortages, services working to capacity, and increase in testing with EPIC in community settings.

HIV testing by priority population

The number of HIV tests by priority population by service for 2017 is shown in Table 2.

Table 2

Number of HIV tests by priority population by service (Period: 2017)

Note: Data extract not available for POW and Albion Centre. The Albion Centre has 1309 Clients in the eMR system, the approximation of the total number of clients being managed is 1090, number on ART is 1031 (Data is calculated by assuming clients with a VL < 100 = being on treatment. Data source: the Albion Centre)

Section 2

WebNAP activity data reported to LHD and MoH
and used locally to provide analysis of SESLHD
HARP services performance

Non-admitted patient occasions of service

The number of non-admitted patient occasions of service (hereafter referred to as ‘occasions of service’) provided by service (Table 4) and for SESLHD overall (Figure 2) for the period 2013-2017 is shown below.

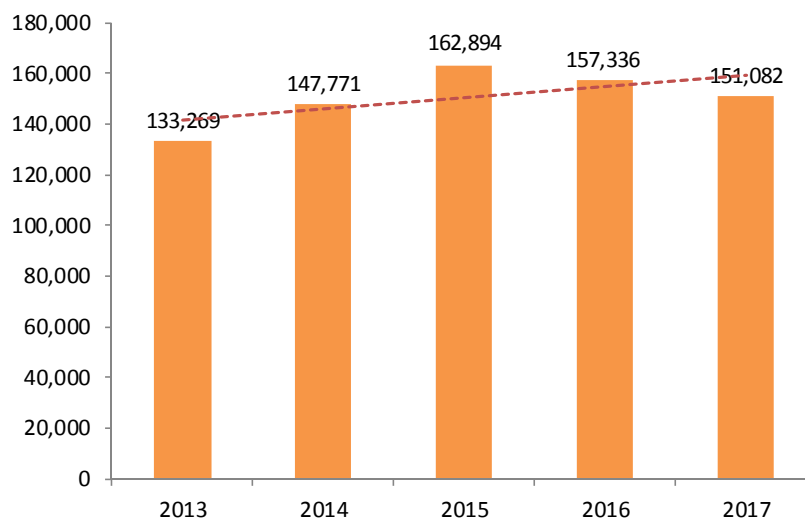

Table 4

Number of occasions of service by service (Period: 2013-2017)

Services	2013	2014	2015	2016	2017
Kirketon Road Centre	18,503	22,732	23,778	27,443	29,684

Figure 2

SESLHD total occasions of service
(Period: 2013-2017)

There was a 3.97% decrease in total occasions of service across SESLHD when comparing the total number of OOS for 2016 with 2017. Total SESLHD numbers decreased primarily due to the Albion Centre's transitional period that followed implementation of eMR CH.

Activity by service unit

The number of occasions of service by service unit for the period from 2016 to 2017 for SESLHD and ISLHD is reported in Table 5.

Table 5

Sydney Children's Hospital - HIV Clinic	58	69	52	57	43

Figure 3
SESLHD total clients
 (Period: 2013-2017)

When comparing the 2016 total number of clients with 2017, there was a 3.3% decrease in the number of clients across SESLHD.

This decrease is due to staff shortages at SSHC and the closure of the ACON/SSHC 414 Elizabeth St in Aug/Sept 2017 due to poor internet connection.

Client characteristics - sex

Table 7 shows the number of clients by sex and service for the period 2017.
